Key words: aphids, species composition, distribution, host plants, mountain Altai, Russia.

Ключевые слова: тли, видовой состав, распространение, растения хозяева, горный Алтай, Россия.

Abstract. A review of the aphid fauna of the Altai Republic, including 278 species and 4 subspecies of 85 genera, is presented. 126 species and 3 subspecies are newly recorded from the Altai Republic. 31 species and 2 subspecies are noted in Western Siberia for the first time, and 15 species are newly recorded from the territory of Russia. The majority of the recorded species (74 %) have a Palaearctic geographical distribution. In accordance with the global pattern of evolution of aphids and their host plants, the majority of aphids of the Altai Republic either permanently inhabit herbaceous plants (monoecious species) or migrate to them from woody primary hosts (dioecious species). The majority of the recorded aphid species (58 %) are narrow oligophages, 19 % of species are monophages, 18 % are wide oligophages, and only 5 % of species are polyphages (i.e. inhabit host plants of several families).

Резюме. Представлен обзор фауны тлей Республики Алтай, который включает 278 видов и 4 подвида из 85 родов. 126 видов и 3 подвида впервые отмечены на территории Республики Алтай, 31 вид и 2 подвида — в Западной Сибири, а 15 видов оказались новыми для России. Большинство зарегистрированных видов тлей (74 %) имеет Палеарктическое распространение. В соответствии с основной тенденцией эволюции взаимоотношений тлей и их кормовых растений, большинство тлей Республики Алтай либо постоянно живут на травянистых растениях (однодомные виды), либо мигрируют на них с первичных хозяев — древесных растений (двудомные виды). Большинство зарегистрированных видов тлей (58 %) являются узкими олиофагами, 19 % — монофагами, 18 % — широкими олиофагами, и только 5 % являются полифагами (т.е. обитают на растениях-хозяевах из нескольких семейств).

Introduction

The Altai (Altay, Altaj) Republic is a small (92 600 sq. km) province of the Russian Federation (Fig. 1). It is situated in the center of Eurasia at the junction of sever-

al natural zones within the Russian part of the Altai mountain system, which covers a large part of the Republic and continues into neighboring Kazakhstan, Mongolia and China. The relief of the province is characterized by high mountain ridges separated by narrow and deep river valleys or, rarely, wide intermountain hollows. The highest peak, Belukha (4506 m), is the highest point in Siberia. The Altai Republic has temperate continental climate with relatively short and hot summers (June – August) and long, cold, and in some places very snowy winters (November – March). The average annual precipitation varies from 100 to 1000 mm.

Studies on the aphid fauna of the Altai Republic began in the early 20th century when V.I. Vereshchagin collected about 30 aphid species, between 1911 and 1914, mainly in the Chemalsky district near the village Anos. Only three of these species were mentioned by Mordvilko in his publications of 1914 and 1919, with a fourth in 1924 [Mordvilko, 1914, 1919, 1924]. Much of Vereshchagin's material remained unpublished and was stored in the collection of the Zoological Institute of the Russian Academy of Sciences. In later publications, Mordvilko used the name «Altai» in the descriptions of species, but he did not further specify the collection localities and it is impossible to understand whether he was referring to the Altai Republic or Altai Krai, a neighboring province. Further studies of the aphid fauna of the region resumed only in the 1960s, undertaken by O.I. Ivanovskaya. She, together with her students, collected about 600 samples in various parts of the Altai Republic between 1961 and 1978. Data about collected specimens are found in a number of Ivanovskaya's papers, but they are most fully represented in her monograph devoted to aphids of Western Siberia, which lists 129 species in the Altai Republic [Ivanovskaya, 1977]. Ivanovskaya's last publication treating the aphids of the Altai Republic appeared in 1988. After a long (15-years) break the research of aphid

fauna in the region has resumed. Since 2003, several complex expeditions to the Altai were organized by the Institute of Systematics and Ecology of Animals SB RAS (Novosibirsk, Russia). As a result a number of papers concerning fauna of aphids [Stekolshchikov et al., 2008; Stekolshchikov, Novgorodova, 2010, 2013] and ant-aphid trophobiotic interactions in North-Eastern Altai, including the data collected in the Altai Republic and Altai Krai [Novgorodova, 2012] have been published. However, a regional checklist of the aphid fauna of the Altai Republic has never been established. In this article we provide a critical review and synthesis on the aphids of the Altai Republic basing on the material collected during expeditions, collection materials and scattered notes in numerous publications.

Materials and methods

The paper is based on the material collected in the Altai Republic by T.A. Novgorodova in 2003–2013 and by A.V. Stekolshchikov in 2010. We also list the material collected by A.V. Gavril'yuk, Grigor'ev, L.G. Gurenko, Guseva, Guselnikov, A.A. Emel'yanov, A.Z. Ermolenko, O.I. Ivanovskaya, Kazarinova, S.M. Kharinova, Kononenko, Yu.P. Korshunov, Levina, F.I. Opanasenko, E. Roddendorf, Yu. M. Rukavishnikov, Ryzhkova, Semenov, V.S. Sorokina, Stebaeva, V.K. Stroganova, A. Tserepanov, V. I. Vereshchagin, Zheltikova.

Microscope slides were prepared using Faure-Berlese mounting fluid or Canada balsam [Blackman, Eastop, 2000]. The material is deposited at the Institute of Systematics and Ecology of Animals and at the Zoological Institute, Russian Academy of Sciences. Aphid synonymy follows Remaudière and Remaudière [1997] with subsequent additions [Blackman, Eastop, 2011; Eastop, Blackman, 2005; Favret, 2015; Holman, 2009]. Data obtained by identifying mounted specimens and extracted from publications are summarized in the list of species.

For listing the material the following notation is used. **Mayminsky district (May)**: 1 — near Gorno-Altaysk, 2 — near Mayma Vill., 3 — near Rybalka Vill., 4 — near Dubrovka Vill., 5 — near Manzherok Vill.; **Turochaksky district (Tur)**: 6 — near Kebezen' Vill., 7 — Artybash Vill., 8 — Iogach Vill., 9 — cordon (guardhouse) Obogo, 10 — 10 km E cordon (guardhouse) Obogo, 11 — Archa Mountain, 12 — cordon (guardhouse) Samysh, 13 — Yayl'u Vill., 14 — cordon (guardhouse) Chelyush, 15 — the confluence of Tibezya and Biya Rivers, 16 — Baskon River valley, 17 — the confluence of Yurtok Biya Rivers; **Ulagansky district (Ula)**: 18 — Kolyushtu Mt., 19 — Kyga River valley, 20 — Bayas River valley, 21 — Kok-Pash Vill. (earlier Ust'-Bashkaus Vill.), 22 — Chulyshman River valley (gorge Ak-Kurum), 23 — near cordon (guardhouse) Chiri (Chulga River valley), 24 — Ulaganskaya steppe (earlier Ust'-Ulaganskaya steppe), 25 — near Ulagan Vill. (earlier Ust'-Ulagan Vill.), 26 — Bashkaus River valley, 27 — valley of Chiri River, 28 — Aktash Vill., 29 — Tuzhu mountain; **Kosh-Agachsky district (KAg)**: 30 — Chuya River valley ($50^{\circ}09' N$ $88^{\circ}17' E$), 31 — Kuray Vill., 32 — 1 km NW Kuray Vill., 33 — Kurai steppe,

34 — Tyurgun' River valley, 35 — Chuya steppe, 36 — the northern slope of the North Chuya mountain range (Aktru River valley), 37 — the southern slope of the Kurai mountain range, 38 — near Kosh-Agach Vill., 39 — lower reaches of the Tara River, 40 — Dzhazator River valley (27 km to Belyashi), 41 — the confluence of Dzhazator and Ku-Karagay Rivers, 42 — the confluence of Dzhazator and Ak-Bul Rivers, 43 — the confluence of Dzhazator and Chikty Rivers, 44 — the confluence of Dzhazator and Tangyt Rivers, 45 — the confluence of Dzhazator and Arzhan Rivers, 46 — 17 km SE Belyashi Vill., 47 — the confluence of Akkol River and Akalakha River (Ukok Plateau), 48 — the confluence of Karabulak and Akalakha Rivers (Ukok Plateau), 49 — Zhumaly River valley ($49^{\circ}27' N$, $88^{\circ}03' E$; Ukok Plateau), 50 — near Kal'dginkul and Kal'dginkul-Bas Lakes (Ukok Plateau), 51 — 8 km NE Maytobe mountain (Ukok Plateau), 52 — near Tashanta Vill., 53 — Naryn-Gol River valley, 54 — gorge Oy-Tuterek; **Chemalsky district (Che)**: 55 — Uznezya Vill., 56 — Anos Vill., 57 — place of confluence of Biyka and Katun Rivers, 58 — Chemal Vill., 59 — place of confluence of Edigan and Katun Rivers; **Shebalinsky district (She)**: 60 — Il'inka Vill., 61 — near Cherga Vill., 62 — near Verkh-Kukuya Vill., 63 — near Mukhorcherga Vill., 64 — Cherginskiy mountain range, near Belok Mukhor-Cherga Mountain, 65 — Sema River valley; **Ust-Kansky district (UKa)**: 66 — Ust'-Kan Vill., 67 — Yabogansky mountain pass, 68 — Kanskaya steppe, **Ongudaysky district (Ong)**: 69 — Ursul River valley, near Tuekta Vill., 70 — Onguday Vill., 71 — Zaysanskaya Elan' Vill., 72 — Terektsky ridge (the upper reaches of the Bol'shoy Yaloman River), 73 — Seminsky mountain pass, 74 — Bol'shoy Yaloman River valley (the middle reaches of the river), 75 — Chike-Taman mountain pass; **Ust-Koksinsky district (Uko)**: 76 — Mul'ta Vill., 77 — Ust'-Koksa Vill., 78 — vicinity of Kucherlinskoe Lake, 79 — Uimon steppe, 80 — Kurunda Vill., 81 — Terekta Vill., 82 — Katunskiy mountain range; **Choysky district (Cho)**. These points of aphid sampling are shown on the map of the Altai Republic (Fig. 1).

Ivanovskaya [1977] referred to her microscope slides based on the description of each morph of each species; it was always a single code for each morph, but the codes for different morphs of a single species were different. Also, if Ivanovskaya's «Distribution» data indicated more than one area of the Altai Republic or Western Siberia, it was impossible to understand which geographic area corresponded to which microscope slide code. In some cases, the published codes corresponded to the Altai Republic samples were found at the Institute of Systematics and Ecology of Animals. This allowed us to double-check the accuracy of some published information. These data are marked by an asterisk (*) in the list of species. However, because Ivanovskaya sometimes pinpointed several collection sites for a species, our validation of the identification of specimens from one site does not transfer to specimens from other sites. Some of these and other cases are discussed and clarified below.

Fig. 1. Map of the Altai Republic with points of aphid sampling (numbers as in the text).

Lachnidae

Cinara abietisibiricae Binazzi et Battisti, 1998**Material.** 7: 25–31.V.1967, 13.VI.1971; 8: 4VI.1967.**Host plant(s).** *Abies sibirica* Ledeb.

Notes. Binazzi and Battisti [1998] described this species for several specimens collected at an altitude of 1150 m a.s.l. on July 3 in Western Sayan. We have identified several samples from the Altai Republic are stored in the collection of the Institute of Systematics and Ecology of Animals as *C. abietisibiricae*. The specimens on these slides, as well as paratypes of the species in the collection of the Muséum national d'Histoire naturelle (Paris, France), greatly resemble *Cinara longipennis* (Matsumura, 1917), also recorded from the Altai Republic. However, the small amount of available material does not allow us to draw any definitive conclusions regarding these two nominal species and further research is needed. It should also be noted that all the samples in the collection of the Institute of Systematics and Ecology of Animals were made in late May to early June whereas the type material was collected in early July, but at high altitude. The collections early in the year leave open the possibility that the collected specimens may be fundatrices of another species, for example *C. confinis* (Koch, 1856).

Cinara confinis (Koch, 1856)Novgorodova [2012]: Tur, on *Abies sibirica* Ledeb.**Material.** 7: 7.VII.1968, 9.VIII.2007, 6–7.VII.2010; 17: 23.VII.1978.**Host plant(s).** *Abies sibirica* Ledeb., *Pinus sibirica* Du Tour (accidentally?).*Cinara costata* (Zetterstedt, 1828)**Material.** 9: 20.VI.2003.**Host plant(s).** *Picea obovata* Ledeb.*Cinara cuneomaculata* (Del Guercio, 1909)Ivanovskaya [1977]: Kag, Ong, Tur, on *Larix* sp.**Material.** 13: 23.VII.1964; 14: 18.VIII.1961, 24.VII.1971; 31: 2, 27–28.VI.1960, 21.VI.1963; 39: 1–2, 4.VII.2006; 47: 12.VII.2006; 62: 17, 18.VII.2011; 63: 22.VII.2011; 76: 11.VII.2013.**Host plant(s).** *Larix sibirica* Ledeb.*Cinara kochiana* (Börner, 1939)**Material.** 63: 18.VII.2011.**Host plant(s).** *Larix sibirica* Ledeb.*Cinara laricis* (Hartig, 1839)Ivanovskaya [1977]: *KAg, Ong, Tur, Ula, on *Larix sibirica*.**Material.** 14: 16.VIII.1961; 31: 2, 20.VI.1960; 34: 31.VIII.1962; 39: 3.VII.2006, 11.VII.2009; 60: 19.VII.2011; 63: 22.VII.2011; 73: 24.VIII.1962; 77: 31.VII.1972, 18.VII.1975.**Host plant(s).** *Larix sibirica* Ledeb.***Cinara longipennis* (Matsumura, 1917)**Material.** 7: 11.VII.1971; 15–16, 20.VI.2009.**Host plant(s).** *Abies sibirica* Ledeb.*Cinara mongolica* Szelegiewicz et Holman, 1980Novgorodova [2012]: Tur, on *Pinus sibirica* Du Tour.**Material.** 7: 31.V.1967; 8.VIII.2007, 17.VIII.2010; 8: 11.VII.1967; 9: 22, 27.VI.2003; 12: 11.VI, 4.VII.1965; 13:

18–20.VI. 1963; 17: 26.VI.1963, 15.VIII.1969; 63: 22.VII.2011;
73: 2.VII.1959; 76: 13, 15.VII.2013.

Host plant(s). *Pinus sibirica* Du Tour.

Cinara nuda Mordvilko, 1895

Ivanovskaya [1977]: Tur.

Material. 7: 16.VII.2010.

Host plant(s). *Abies* sp. (accidentally).

Cinara pectinatae (Nördlinger, 1880)

Material. 6: 20.VI.2004; 7: 7.VIII.2007.

Host plant(s). *Abies sibirica* Ledeb., *Pinus sibirica* Du Tour.

Notes. Ivanovskaya [1977] mentions this species, sample 2724. Two slides with this code are stored in the collection, both containing only larvae, insufficient to identify species. We do not know if Ivanovskaya had additional slides, so the record of this species in the province cannot be considered completely reliable.

Cinara piceae (Panzer, 1801)

Ivanovskaya [1977]: Tur, on *Picea obovata* (as *Cinara grossa* Kalt., 1843), on *Abies sibirica* (as *Cinara piceae* Panz., 1801).

****Cinara piceicola* (Cholodkovsky, 1896)

Material. 27: 31.VII.2007

Host plant(s). *Picea obovata* Ledeb.

Cinara pilicornis (Hartig, 1841)

Material. 7: 8.VII.2010; 30: 29.VI.2006.

Host plant(s). *Picea obovata* Ledeb.

Cinara pinea (Mordvilko, 1895)

Ivanovskaya [1977]: Ong, Tur, on *Pinus* sp.

Material. 6: 20–21.VI.2004; 7: 6–7, 16.VII.2010; 13: 18.VI.1963, 24.VII.1972; 23: 5.VIII.1978.

Host plant(s). *Abies* sp. (accidentally), *Pinus sibirica* Du Tour; *P. sylvestris* L.

Cinara pini (Linnaeus, 1758)

Ivanovskaya [1977]: Tur: *Pinus* sp.

Material. 7: 8–9.VIII.2008, 17.VII.2010.

Host plant(s). *Pinus sylvestris* L.

Cinara pinihabitans (Mordvilko, 1895)

Ivanovskaya [1977]: Tur: *Pinus* sp.

Cinara (Cupressobium) juniperi
(DeGeer, 1773)

Ivanovskaya [1977]: KAg: *Juniperus* sp.

Material. 77: 28.VII.1975.

Host plant(s). *Juniperus communis* L.

Eulachnus agilis (Kaltenbach, 1843)

Ivanovskaya [1977]: Ong, Tur, Ula, on *Pinus sibirica* (as *Protolachnus agilis* Kalt., 1843).

Material. 10: 8.VIII.2004; 12: 10.VIII.1965; 13: 14.VII.1971; 73: 26.VII.1963; 77: 28.VII.1975.

Host plant(s). *Pinus sibirica* Du Tour.

Maculolachnus submacula (Walker, 1848)

Ivanovskaya [1977]: Tur: *Rosa* sp.

Material. 3: 20.VII.2009; 55: 9.VII.1914.

Host plant(s). *Rosa* sp.

Schizolachnus pineti (Fabricius, 1781)

Material. 7: 10.VIII.2007, 7.VII.2010; 16: 24.VII.1971.

Host plant(s). *Pinus sylvestris* L.

Trama troglodytes von Heyden, 1837

Material. 22: 5–6.VIII.1978.

Host plant(s). *Artemisia absinthium* L., *A. vulgaris* L.

Mindaridae

Mindarus abietinus Koch, 1857

Ivanovskaya [1977]: Tur, on *Abies* sp.

***Mindarus japonicus* Takahashi, 1931

Material. 76: 11, 13.VII.2013.

Host plant(s). *Pinus sibirica* Du Tour, *Spiraea* sp., *Schulzia crinita* (Pall.) Spreng. (all plants accidentally).

Anoeciidae

Anoecia corni (Fabricius, 1775)

Ivanovskaya [1977]: Tur.

Material. 6: 21.VI.2004; 55: 13.VII.1914.

Host plant(s). *Cornus alba* L., *Elymus caninus* (L.) L.

The laxidae

Glyphina betulae (Linnaeus, 1758)

Ivanovskaya [1977]: She, Tur, on *Betula* sp.

Material. 7: 19.VI.2003; 9: 20.VI.2003; 13: 18.VI.1963; 61:

27.VII.1963, 16–20.VII.2011; 74: 1.VIII.2007; 76: 14.VI.2013.

Host plant(s). *Betula pendula* Roth., *Betula* sp.

Glyphina pseudoschrankiana Blackman, 1989

Material. 7: 3, 7.VII.2010; 61: 24.VII.1963.

Host plant(s). *Betula* sp.

Drepanosiphidae

Betulaphis quadrituberculata (Kaltenbach, 1843)

Material. 13: 30.VII.1961, 14.VI.1963.

Host plant(s). *Betula* sp.

Calaphis flava (Mordvilko, 1928)

Material. 7: 6.VII.2010; 8: 1.VI.1967; 76: 11.VII.2013.

Host plant(s). *Betula* sp.

***Callipterinella calliptera* (Hartig, 1841)

Material. 7: 21.VII.2010.

Host plant(s). *Betula* sp.

Callipterinella tuberculata (von Heyden, 1837)

Ivanovskaya [1977]: Tur, on *Betula* sp. (as *Callipterinella betularia* Kalt., 1843).

Material. 7: 4–17.VII.2010; 23: 27.VIII.1961, 30.VII.1969;

76: 14.VI.2013.

Host plant(s). *Betula* sp.

Euceraphis betulae (Koch, 1855)

Material. 64: 22.VII.2011.

Host plant(s). *Bergenia crassifolia* (L.) Fritsch (accidentally).

***Euceraphis betulijaponicae* (Matsumura, 1919)

Material. 7: 13.VII.1968; 77: 18.VII.1975.

Host plant(s). *Larix sibirica* Ledeb. (accidentally).

Euceraphis punctipennis (Zetterstedt, 1828)

Material. 9: 9.VII.2010; 17: 19.VIII.1963; 25: 17.VII.1963;

Material. 7: 17.VII.1963.**Host plant(s).** *Malus* sp.*Rhopalosiphum nymphaeae* (Linnaeus, 1761)

Ivanovskaya [1977]: Ong, Ula.

Notes. Ivanovskaya [1977] reports this species from two localities in the Altai Republic. She also describes the male, sample 3205, the data for which correspond to one of the localities. We examined a slide with code, containing two gynoparae and one male of *Dysaphis (Pomaphis) plantaginea* (Passerini, 1860) and one gynopara of *Rhopalosiphum oxyacanthae* (Schrank, 1801). Thus, at least part of data about the presence of *R. nymphaeae* in the Altai Republic actually relates to different species of *Rhopalosiphum*.*Rhopalosiphum oxyacanthae* (Schrank, 1801)Ivanovskaya [1977]: May (as *Rhopalosiphum insertum* Walk., 1849).**Material.** 9: 28.VI.2003; 23: 3.X.1963.**Host plant(s).** *Dactylis glomerata* L., *Malus* sp.*Rhopalosiphum padi* (Linnaeus, 1758)

Material. 1: 22.VIII.1962; 7: 11.VII.1968, 16.VII.2010; 19: 13.VII.1969; 56: 29.VI.1911; 62: 17–18.VII.2011; 76: 12, 14.VII.2013.
Host plant(s). *Bupleurum aureum* Fisch., *B. multinerve* DC., *Bupleurum* sp.
- Aphis taraxacicola* (Börner, 1940)
 Ivanovskaya [1977]: UKa.
Material. 9: 11.VII.2010; 39: 2.VII.2006, 11.VII.2009.
Host plant(s). *Taraxacum officinale* Weber, *Taraxacum* sp.
- Aphis triglochinis* Theobald, 1926
Material. 3: 29.VII.2010; 25: 17.VII.1963; 69: 30.V.1911.
Host plant(s). *Ribes nigrum* L., *Ribes* sp., *Rorippa sylvestris* (L.) Besser.
- Aphis ucrainensis* Zhuravlyov, 1997
 Stekolshchikov et al. [2008]: KAg, on *Spiraea* sp.
Material. 39: 2, 4.VII.2006, 13.VII.2009; 47: 14.VII.2006.
Host plant(s). *Spiraea* sp.
- Aphis ulmariae* Schrank, 1801
 Ivanovskaya [1977]: Tur.
Material. 7: 6, 8.VIII.2007, 2, 5.VII.2010; 8: 10.VII.1967; 13: 28.VII, 5.VIII.1961; 61: 16, 19, 20.VII.2011; 62: 18.VII.2011.
Host plant(s). *Filipendula ulmaria* (L.) Maxim., *Spiraea* sp.
- ***Aphis umbelliferarum* (Shaposhnikov, 1950)
Material. 42: 12.VII.2009.
Host plant(s). *Seseli* sp.
- Aphis urticata* J.F. Gmelin, 1790
 Ivanovskaya [1977]: KAg, Ong, Tur, on *Urtica* sp.
Material. 7: 25.VI.1968, 4–7.VII.2010; 13: 5.VIII.1961, 23.VII.1964; 61: 16.VII.2011; 62: 18.VII.2011.
Host plant(s). *Urtica dioica* L., *U. urens* L., *Urtica* sp.

Aphis veratri Walker, 1852

Ivanovskaya [1977]: Ong, Tur, on *Veratrum* sp.

Material. 13: 18.VI.1963; 20: 2.VIII.1969; 56: 11.VI.1911; 73: 27.VII.1963.

Host plant(s). *Veratrum album* L., *Veratrum* sp.

Notes. Ivanovskaya [1977] gives a description of this species on the basis of sample 2668. However, these aphids are actually *A. fabae* Scopoli, 1763.

Aphis viburni Scopoli, 1763

Material. 7: 4.VII.2010.

Host plant(s). *Viburnum* sp.

Aphis (Bursaphis) grossulariae Kaltenbach, 1843

Material. 7: 15.VII.1967, 5.VII.2010; 9: 28.VI.2003; 11: 26.VI.2003; 27: 31.VII.2007; 63: 18.VII.2011.

Host plant(s). *Ribes nigrum* L., *R. rubrum* L., *Ribes uva-crispa* L.

Aphis (Bursaphis) schneideri (Börner, 1940)

Ivanovskaya [1977]: May, on *Ribes nigrum*; Novgorodova [2012]: Tur.

Material. 7: 14.VII.1968; 2–5.VII.2010; 20: 16.VII.1969; 74: 1.VIII.2007; 76: 14.VII.2013.

Host plant(s). *Ribes rubrum* L., *R. nigrum* L.

Aphis (Bursaphis) varians Patch, 1914

Ivanovskaya [1977]: KAG, Ula, on *Ribes nigrum* L.

Material. 56: 24.VI.1911; 63: 22.VII.2011.

Host plant(s). *Epilobium palustre* L., *Ribes* sp.

Notes. Ivanovskaya [1977] gives a description of the apterous females of this species on the basis of the sample 2918. However, these aphids are actually *A. triglochinis* Theobald, 1926.

Aphidinae

Macrosiphini

Anuraphidina

Brachycaudus helichrysi (Kaltenbach, 1843)

Ivanovskaya [1977]: Ong, She, UKA, Ula.

Material. 24: 18.VII.1963; 56: 6.VII.1911; 67: 5.VII.1963; 74: 10.VII.1963; 73: 26.VI.1963; 76: 15.VII.2013.

Host plant(s). *Achillea millefolium* L., *Achillea* sp., *Senecio nemorensis* L., *Solidago virgaurea* L.

Brachycaudus spiraeae Börner, 1932

Material. 41: 12.VII.2009; 50: 17, 20.VII.2006; 49: 23.VII.2006; 69: 6.VII.1963; 73: 27.VII.1963.

Host plant(s). *Artemisia* sp. (accidentally), *Antirrhinum* sp. (accidentally), *Spiraea* sp.

Brachycaudus (Acaudus) lychnidis (Linnaeus, 1758)

Ivanovskaya [1977]: She, Tur.

Material. 3: 27, 31.VII.2010; 56: 23.VI.1911; 61: 27.VII.1963; 76: 11.VII.2013.

Host plant(s). *Silene latifolia* Poir., *Silene vulgaris* (Moench) Garcke, *Silene* sp.

****Brachycaudus (Acaudus) populi*
(Del Guercio, 1911)

Material. 7: 15.VII.2010; 56: 24.VI.1911.

Host plant(s). *Oberna behen* (L.) Ilkonn., *Silene vulgaris* (Moench) Garcke.

Brachycaudus (Acaudus) prunicola (Kaltenbach, 1843)

Material. 7: 7.VII.2010.

Host plant(s). *Prunus* sp.

Brachycaudus (Appelia) tragopogonis
(Kaltenbach, 1843)

Ivanovskaya [1977]: Ong.

Notes. Ivanovskaya [1977] does not indicate which subspecies of *B.(A.) tragopogonis* was collected.

Brachycaudus (Appelia) tragopogonis setosus
(Hille Ris Lambers, 1948)

Material. 3: 31.VII.2010; 62: 17.VII.2011.

Host plant(s). *Tragopogon* sp.

Brachycaudus (Brachycaudina) aconiti
(Mordvilko, 1928)

Ivanovskaya [1977]: Tur.

Material. 7: 21, 27.VI.1968, 8.VIII.2007, 3, 4: 7.VII.2010; 8: 10, 15.VII.1967; 13: 30.VII, 5.VIII.1961, 18.VI.1963; 17: 9.VII.1969; 20: 10.VII.1969; 27: 28.VII.1969; 56: 24–25.VI, 8.VII.1911; 61: 16.VII.2011; 63: 18.VII.2011; 70: 21.VII.1959.

Host plant(s). *Aconitum barbatum* Pers., *A. excelsum* Rchb., *A. septentrionale* Koelle, *Aconitum* sp., *Delphinium* sp.

Brachycaudus (Nevskyaphis) bicolor Nevsk.

Stekolshchikov et al. [2008]: Kag, on *Cerinthe* sp.

Material. 39: 3.VII.2006.

Host plant(s). *Inula* sp.

Brachycaudus (Prunaphis) cardui (Linnaeus, 1758)

Material. 7: 10.VII.2007, 21.VII.2008, 5.VII.2010.

Host plant(s). *Brunnera sibirica* Steven, *Carduus nutans* L.

Brachycaudus (Prunaphis) jacobi Stroyan, 1957

Material. 7: 5.VII.2010.

Host plant(s). *Myosotis* sp.

Brachycaudus (Thuleaphis) rumexicolens
(Patch, 1917)

Ivanovskaya [1977]: without mentioning an exact place.

Dysaphis affinis (Mordvilko, 1928)

Material. 3: 25.VII.2010

Host plant(s). *Malus* sp.

****Dysaphis apiifolia petroselini*
(Börner, 1950)

Material. 3: 25.VII, 1.VIII.2010.

Host plant(s). *Conium maculatum* L.

***Dysaphis hirsutissima* (Börner, 1940)

Material. 7: 5, 20.VII.2010.

Host plant(s). *Anthriscus sylvestris* (L.) Hoffm.

Dysaphis lappae lappae (Koch, 1854)

Material. 3: 27.VII.2010.

Host plant(s). *Arctium lappa* L.

***Dysaphis newskyi* (Börner, 1940).

Material. 3: 31.VII.2010; 7: 4, 24.VII.2010.

Host plant(s). *Heracleum* sp.

***Dysaphis ossianilssonii* Stroyan, 1961

Material. 7: 4, 21.VII.2010.

Host plant(s). *Angelica* sp.

Dysaphis (Pomaphis) pavlovskiana
Narzikulov, 1957

Ivanovskaya [1977]: Ula, on *Hesperis matronalis* L.
Material. 37: 19.VII.2013.

Host plant(s). *Artemisia* sp. (accidentally?)

***Dysaphis (Pomaphis) plantaginea*
(Passerini, 1860)

Material. 23: 3–4.X.1963.

Host plant(s). *Malus* sp.

***Muscaphis escherichi* (Börner, 1939)

Material. 9: 10.VII.2010.

Host plant(s). *Sorbus* sp.

Liosomaphidina
Brevicoryne brassicae (Linnaeus, 1758)

Ivanovskaya [1977]: Tur.

Cavariella aegopodii (Scopoli, 1763)

Ivanovskaya [1977]: KAg, Ong.

Material. 62: 17.VII.2011; 75: 9.VII.1963.

Host plant(s). *Epilobium angustifolium* L. (accidentally?)

Cavariella angelicae (Matsumura, 1918)

Stekolshchikov, Novgorodova [2013]: May, She, on *Anthicus sylvestris* (L.) Hoffm., *Angelica* sp., *Heracleum sibiricum* L., *Heracleum* sp.

Material. 3: 27.VII.2010; 60: 19.VII.2011; 61: 16.VII.2011; 62: 17, 18.VII.2011; 63: 22.VII.2011.

Host plant(s). *Anthicus sylvestris* (L.) Hoffm., *Angelica* sp., *Heracleum sibiricum* L., *Heracleum* sp.

Notes. Ivanovskaya [1977] gives a description of alate females of this species on the basis of sample 2681. However, these aphids are actually *C. intermedia* Hille Ris Lambers, 1969. Ivanovskaya also notes that colony of this species was found July 9, 1963 on *Epilobium angustifolium* L. Our examination of this slide confirmed that the correct identification should be *C. aegopodii*. Specimens were again collected July 17, 2011 by Novgorodova on *Epilobium angustifolium* near Verkhnyaya Kukuya Village. The life cycle and host association of this species are required. Perhaps aphids from the Altai belong to other taxa.

Cavariella archangelicae (Scopoli, 1763)

Material. 62: 17.VII.2011.

Host plant(s). *Seseli* sp.

Cavariella intermedia Hille Ris Lambers, 1969

Stekolshchikov et al. [2008]: KAg, on *Salix* sp.

Material. 47: 13.VII.2006; 61: 16.VII.2011; 69: 7.VII.1963.

Host plant(s). *Anthriscus sylvestris* (L.) Hoffm., *Peucedanum* sp. (1 alatae – accidentally?), *Salix aurita* L., *Salix* sp.

***Cavariella kanoi* Takahashi, 1939

Material. 7: 2, 6, 21, 24.VII.2010, 22: 9.VIII.1978.

Host plant(s). *Aegopodium* sp., *Angelica* sp., unidentified Apiaceae.

Cavariella pastinacae (Linnaeus, 1758)

Material. 3: 27.VII.2010; 62: 17, 18, 19, 22.VII.2011; 63: 22.VII.2011.

Host plant(s). *Heracleum sibiricum* L., *Heracleum* sp.

Cavariella theobaldi (Gillette et Bragg, 1918)

Material. 23: 30.VIII.1967, 30.VII.1969; 37: 19.VII.2013; 39: 13.VII.2009; 53: 17.VII.2009; 62: 18.VII.2011; 63: 22.VII.2011.

Host plant(s). *Heracleum sibiricum* L., unidentified Apiaceae.

Cavariella (Cavaraiellia) aquatica
(Gillette et Bragg, 1916)

Ivanovskaya [1977, 1980]: *Tur, Ula on *Salix* sp. (as *Cavariella hillierislambersi* Oss., 1959).

Material. 17: 2.IX.1963; 47: 12.VII.2006; 77: 26.VII.1975.

Host plant(s). *Salix* sp.

Chaitaphis tenuicauda Nevsky, 1928

Ivanovskaya [1977]: KAg.

****Coloradoa angelicae* (Del Guercio, 1911)

Material. 54: 29.VIII.1962.

Host plant(s). *Artemisia* sp.

Coloradoa artemisiae (Del Guercio, 1914)

Ivanovskaya [1977]: KAg, Ula, on *Artemisia* sp.

Coloradoa heinzei (Börner, 1952)

Ivanovskaya [1977]: Uka, on *Artemisia frigida* Willd.

Material. 67: 24.VII.1963; 74: 10.VII.1963.

Host plant(s). *Artemisia* sp.

Elatobium abietinum (Walker, 1849)

Ivanovskaya [1977]: the Altai Mountains (without mentioning an exact place), on *Pinus sibirica*.

Hayhurstia atriplicis (Linnaeus, 1761)

Ivanovskaya [1977]: KAg, Ong, on *Atriplex* sp. (as *Semiphis atriplicis* L., 1761).

Material. 74: 10.VII.1963.

Host plant(s). *Atriplex* sp.

Hyadaphis passerinii (Del Guercio, 1911)

Ivanovskaya [1977]: Tur, on *Lonicera* sp.

Hyadaphis tataricae (Aizenberg, 1935)

Material. 3: 28.VII.2010; 7: 10.VIII.2007; 11: 26.VI.2003; 27: 31.VII.2007.

Host plant(s). *Lonicera tatarica* L., *Rhinanthus* sp. (accidentally), *Thalictrum minus* L., *Thalictrum* sp.

Hydaphias molluginis Börner, 1939

Material. 69: 30.IX.1962

Host plant(s). *Gallium* sp.

****Hydaphias mosana* Hille Ris Lambers, 1956

Material. 67: 25.VII.1963, 82: 31.VII.1975.

Host plant(s). *Galium verum* L., *Gallium* sp.

Lipaphis erysimi (Kaltenbach, 1843)

Ivanovskaya [1977]: Uka.

Longicaudus trirhodus (Walker, 1849)

Material. 7: 10.VIII.2007; 61: 16, 20.VII.2011; 62: 17.VII.2011; 63: 22.VII.2011; 82: 31.VII.1975.

Host plant(s). *Rhinanthus* sp. (accidentally), *Thalictrum minus* L., *Thalictrum* sp.

Myzaphis rosarum (Kaltenbach, 1843)

Ivanovskaya [1977]: UKa, Ula, on *Potentilla* sp.

Material. 31: 20.VII.2013; 41: 12.VII.2009; 43: 12.VII.2009; 47: 14.VII.2006, 76: 11, 12, 14.VII.2013.

Host plant(s). *Pentaphylloides fruticosa* (L.) O.Schwarz, *Rosa* sp.

Semiaphis aizenbergi (Narzikulov, 1957)

Ivanovskaya [1977]: Tur, Ula, on *Lonicera edulis* Turcz.

Notes. Ivanovskaya [1977] mentions some differences between the material from Siberia and this species as described by Narzikulov. Given this prevarication, as well as the near crypsis of *Semiaphis* species associated with *Lonicera*, it can be assumed that the aphids collected by Ivanovskaya do not belong to *S. aizenbergi* but to a different species.

Semiaphis anthrisci (Kaltenbach, 1843)

Ivanovskaya [1977]: KAg, Ong, Ula.

Material. 1: 28.VI.1962; 7: 3.VII.2010; 17: 13.VIII.1963; 39: 2.VII.2006; 45: 12.VII.2009; 61: 16.VII.2011; 60: 19.VII.2011; 76: 15.VII.2013.

Host plant(s). *Aegopodium podagraria* L., *Anthriscus sylvestris* (L.) Hoffm., *Pastinaca* sp., *Peucedanum* sp., *Se-seli* sp., unidentified Apiaceae.

Notes. Ivanovskaya [1977] mentions that individuals of this species from Siberia differ from those of Europe by the large number of secondary rhinara on the 3rd antennal segment. This casts doubt on the reliability of that aphids are this species.

Semiaphis nolitangere
Aizenberg, 1954

Stekolshchikov et al. [2008]: Tur, on *Impatiens noli-tangere* L.

Material. 7: 7, 10, 19.VIII.2007.

Host plant(s). *Impatiens noli-tangere* L.

***Semiaphis pimpinellae* (Kaltenbach, 1843)

Material. 3: 30.VII.2010

Host plant(s). *Aegopodium podagraria* L.

Semiaphis sphondylii (Koch, 1854)

Material. 9: 9.VII.2010; 17: 2.IX.1963, 30.VIII.1967, 7.VIII.1969; 19: 30.VII.1969; 7, 2–16.VII.2010; 25: 17, 19.VII.1963; 39: 3.VII.2006; 47: 13.VII.2006; 49: 23.VII.2006; 50: 17, 20.VII.2006; 51: 8.VII.2006; 69: 7.VII.1963.

Host plant(s). *Bupleurum aureum* Fisch., *Heracleum sibiricum* L., *Lonicera pallasii* Ledeb., *Lonicera* sp., *Peucedanum* sp., unidentified Apiaceae.

Vesiculaphis theobaldi Takahashi, 1930

Ivanovskaya [1977]: Ong (as *Trilobaphis caricis* Theob., 1922).

Myzina

***Aspidophorodon salicis* Miyazaki, 1971

Material. 32: 20.VII.2013; 76: 14.VII.2013.

Host plant(s). *Salix caprea* L.

Aspidophorodon (Eoessigia) vera
Stekolshchikov et Novgorodova, 2010

Stekolshchikov, Novgorodova [2010]: Kag, on *Pentaphylloides fruticosa* (L.) O. Schwarz.

Material. 39: 2.VII.2006, 11.VII.2009.

Host plant(s). *Pentaphylloides fruticosa* (L.) O. Schwarz.

Aulacorthum cylactis Börner, 1942

Material. 76: 11.VII.2013.

Host plant(s). *Rubus saxatilis* L.

Aulacorthum solani (Kaltenbach, 1843)

Ivanovskaya [1977]: KAg, UKa.

Material. 7: 2, 6.VII.2010; 37: 19.VII.2013.

Host plant(s). *Anthriscus sylvestris* (L.) Hoffm., *Urtica dioica* L.

Myzus padellus Hille Ris Lambers et Rogerson, 1946

Stekolshchikov, Novgorodova [2013]: She, on *Rhinanthus* sp.

Material. 61: 16.VII.2011.

Host plant(s). *Rhinanthus* sp.

Myzus (Nectarosiphon) persicae
(Sulzer, 1776)

Ivanovskaya [1977]: Tur (as *Myzodes persicae* Sulz., 1776).

Material. 49: 23.VII.2006.

Host plant(s). *Rhodiola rosea* L.

Ovatus crataegarius (Walker, 1850)

Stekolshchikov, Novgorodova [2013]: She, on *Mentha* sp.

Material. 61: 19.VII.2011

Host plant(s). *Mentha* sp.

Ovatus insitus (Walker, 1849)

Ivanovskaya [1977]: the Altai Mountains (without mentioning an exact place).

***Paramyzus heraclei* Börner, 1933

Material. 4: 29.VII.2010.

Host plant(s). *Heracleum* sp.

***Phorodon humuli* (Schrank, 1801)

Material. 3: 30.VII.2010.

Host plant(s). *Humulus lupulus* L.

Phorodon (Paraphorodon) cannabis Passerini, 1860

Material. 57: 26.VII.2010.

Host plant(s). *Cannabis sativa* L.

Tubaphis ranunculina (Walker, 1852)

Stekolshchikov, Novgorodova [2013]: She, on *Ranunculus polyanthemos* L.

Material. 61: 20.VII.2011; 76: 11, 15.VII.2013.

Host plant(s). *Ranunculus polyanthemos* L., *Ranunculus* sp.

Macrosiphina

Acyrtosiphon bistorti Ivanovskaya, 1973

Ivanovskaya [1973d, 1977]: Ula, on *Bistorta officinalis* Delabre, 1800.

****Acyrtosiphon boreale* Hille Ris Lambers, 1952

Material. 7: 19.VII.2010; 47: 12, 14.VII.2006; 49: 23.VII.2006; 51: 8, 10.VII.2006.

Comments to the list of species

Cinara cembrae (Seitner, 1936). Ivanovskaya [1977] mentions a single sample of this species from *Pinus cembra* L., code 2723. However, our examination of the specimen marked with this code showed that it is

C. mongolica Szelegiewicz et Holman, 1980. Thus, the presence of *C. cembrae* is not confirmed.

Atheroides doncasteri Ossiannilsson 1955.

Ivanovskaya [1977] mentions this species from the Altai Republic (Kurai steppe), sample 3300. The corresponding slide does not contain aphids, therefore this species should be excluded from the list of aphids.

Aphis intybi Koch, 1855. Ivanovskaya [1977] mentions that specimens of this species from the Altai Republic have morphological differences from those of other areas. Indeed, our study confirmed that the slides contain aphids morphologically close to *A. intybi*, but with important differences. Because the reliable determination of the available material is not currently possible, we have excluded this species from the list of species.

A. rostellum (Zhang, Chen, Zhong et Li, 1999). This species was mentioned in our earlier publication [Stekolshchikov, Novgorodova, 2013]. However the detail investigation of the additional material showed that it might be a synonym of another species of the genus *Aphis*. Since this hypothesis requires additional investigation we excluded this species from the list.

A. spiraeaephila Patch, 1914. According to Zhuravlyov [1997] the recorded presence of this species in Siberia is erroneous.

Brachycaudus (Thuleaphis) amygdalinus (Schouteden, 1905). Ivanovskaya [1977] reported this species only tentatively because its primary host is not present in the area; she suggested the species may be anholocyclic in Siberia. It is more likely that she was dealing with *B. (Thuleaphis) rumexicolens* (Patch, 1917), especially since the aphids were collected from an unknown Polygonaceae.

Hydaphias helvetica Hille Ris Lambers, 1947. Ivanovskaya [1977] gives a description of apterous females on the basis of sample 2998 and oviparous females on the basis of sample 2427. However, aphids from sample 2998 are actually *H. mosana* Hille Ris Lambers, 1956, and aphids from sample 2427 are actually *H. molluginis* Börner, 1939. Since there is no other evidence of *H. helvetica* in the province, and since it is likely that *H. helvetica* is a synonym of *Hydaphias molluginis* Börner, 1939 [Blackman, Eastop, 2011] we excluded this species from the list.

Macrosiphoniella pulvera (Walker, 1848). Ivanovskaya [1977] gives a description of this species on the basis of sample 2838 and emphasizes that this is a single sample from the Altai. However, these aphids are actually *M. artemisiae* (Boyer de Fonscolombe, 1841) and therefore the presence of this species is not confirmed.

M. (Ramtirichophorus) janckeai Hille Ris Lambers, 1947. Ivanovskaya [1977] records this species on the basis of nine larvae collected from an unknown Asteraceae. We consider identifications based on larval stages doubtful, therefore we excluded this species from the list.

Uroleucon (Uromelan) solidaginis (Fabricius, 1779). Ivanovskaya [1977] identifies this species on the basis

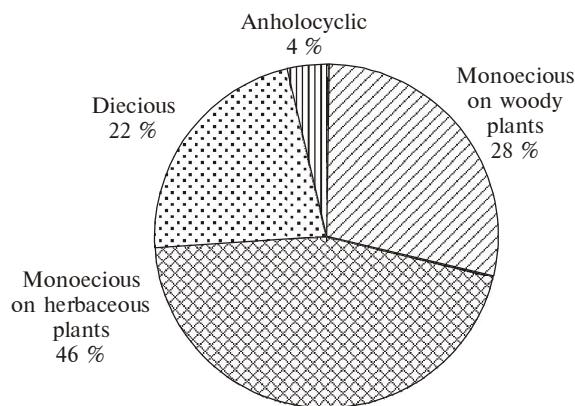

Fig. 2. The proportion of species with different life cycles in the aphid fauna of the Altai Republic.

Рис. 2. Соотношение видов с различными жизненными циклами в афидофауне Республики Алтай.

of only a few larvae. We consider determination based on larval stages doubtful and excluded this species from the list.

Discussion

At present, 278 species and 4 subspecies of aphids belonging to 85 genera are recorded from the Altai Republic. Of these, 126 species and 3 subspecies are newly recorded from the Altai Republic. 31 species and 2 subspecies are noted in Western Siberia for the first time, and 15 species are newly recorded from the territory of Russia. Comparing the aphid diversity of the Altai Republic with that of other territories suggests the region remains understudied. For example, the Altai Republic (area 92 600 km²) is more than twice as large as a similarly mountain region, Switzerland (area 41 285 km²), but has only a little over a half of the recorded aphid

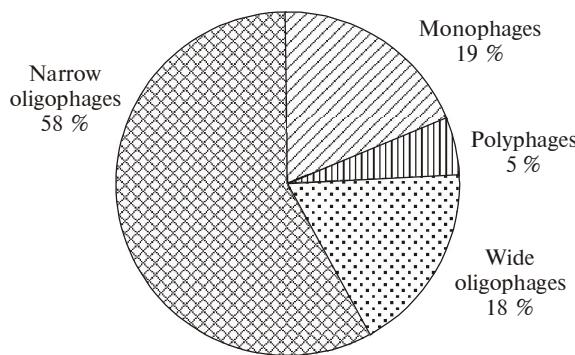

Fig. 3. The proportion of species with different trophic specializations in the aphid fauna of the Altai Republic.

Рис. 3. Соотношение видов с разной трофической специализацией в афидофауне Республики Алтай.

diversity — 477 species [Lampel, Meier, 2003, 2007]. The aphid fauna of the adjacent countries makes it suggest that some 200–250 additional aphid species may yet be found in the Altai Republic.

The majority of aphid species recorded for the Altai Republic (Fig. 2) either inhabit herbaceous plants exclusively (monoecious species) or migrate to them from woody primary hosts (dioecious species). Among the recorded species, 19 % feed on a single host plant, 58 % on various host species from a single genus, 18 % on various hosts from a single family, and only 5 % are truly polyphages, inhabiting host plant species from more than a single family (Fig. 3).

About 74 % of the recorded species have a Palaearctic geographical distribution, Holarctic and cosmopolitan species made up about 12 % each. Only 4 species from the list (*Pemphigus laurifolia* Dolgova, 1973; *Acyrthosiphon bistorti* Ivanovskaya, 1973; *Macrosiphum vereshchagini* Mordvilko, 1919; *Macrosiphoniella altaica* Ivanovskaya, 1971) were found only on the territory of the Altai Republic and adjacent territories. However, the question whether these species are endemic of the region or not is still unclear and requires additional investigation. One more species — *Acyrthosiphon caraganae* (Cholodkovsky, 1908) — has become widespread and now occurs in parks and gardens in different parts of the Holarctic [Mordvilko, 1914].

Acknowledgements

We are grateful to V.S. Sorokina and A.V. Gavril'yuk for providing aphid materials, N. Vesnina (Novosibirsk State Pedagogical University, Novosibirsk) and V.I. Dorofeyev (Komarov Botanical Institute of the Russian Academy of Sciences, St. Petersburg) for the help with identification of host plants, and to Colin Favret (Université de Montréal, Montréal, Canada) and Sergey V. Buga (Belarusian State University, Minsk, Republic of Belarus) for editing the English and commenting on an earlier version of the manuscript. The study was partly supported by the Federal Fundamental Scientific Research Programme for 2013–2020 (VI.51.1.6.) and the Russian Foundation for Basic Research No. 13-04-00268 (T.A. Novgorodova). The study was performed in the frames of the state research project no. 01201351189 and conducted partly with financial support from the Muséum national d'Histoire naturelle (Paris, France) to A.V. Stekolshchikov as invited scientist.
