Abstract. New data on wasps of Kemerovo region are presented. Three species of Pompilidae, 10 species of Vespidae, and 25 species of Crabronidae are newly recorded for the fauna of Kemerovskaya Oblast. Three Crabronidae species, *Crossocerus emarginatus* (Kohl, 1899), *Passaloecus singularis* Dahlbom, 1844 and *Pemphredon flavistigma* Thomson, 1874, are newly registered for West Siberia.

Резюме. В работе представлен список ос семейств Pompilidae — 3 вида, Vespidae — 10 видов и Crabronidae — 25 видов, впервые отмеченные для Кемеровской области. Для Западной Сибири впервые приведены три вида из семейства Crabronidae: *Crossocerus emarginatus* (Kohl, 1899), *Passaloecus singularis* Dahlbom, 1844 и *Pemphredon flavistigma* Thomson, 1874.

The wasp fauna of Kemerovskaya Oblast is not yet fully investigated. The main source of data on the wasp fauna of the Kemerovskaya Oblast is the Catalogue of Hymenoptera insects of Russia [Antropov et al., 2017]. But the Catalogue does not include information about several species given in earlier works [Wnukowskij, 1926; Dubatolov, 1998; Bagirov, 2004, 2007; Nemkov, 2008].

Until now 2 species of Pompilidae, 17 species Vespidae, 5 species of Sphecidae, and 39 species of Crabronidae were recorded for the fauna of Kemerovskaya Oblast.

The present paper includes new data on wasp fauna of Kemerovskaya Oblast.

All material was identified by the first and second authors.

The distribution of species in Russia follows Antropov et al. [2017]. In the list of species, the distribution is given only for the regions of West Siberia; for the general distribution see Antropov et al. [2017] (for abbreviations of the regions see Fig. 1). Specimens were deposited in the collections of Institute of Systematics and Ecology of Animals SB RAS (Novosibirsk), Kemerovo State University (Kemerovo) and in private collections of D.A. Efimov and A.V. Korshunov (Kemerovo).

Additionally some frequently mentioned names of the collectors are abbreviated as follows: D.A. Efimov (DE), A.V. Korshunov (AK), S.L. Luzyanin (SL), D.A. Sidorov (DS).

The present work is registered in ZooBank (www.zoobank.org) under LSID urn:lsid:zoobank.org:pub:B713B1D0-2CCC-4EAB-810E-82484FA99602

Annotated list of wasps (Hymenoptera, Aculeata) from Kemerovskaya Oblast of Russia are provided in the Appendix (p. 13–15)

In total, 38 species of wasps belonged to three families, Pompilidae (3 species), Vespidae (10), and Crabronidae (25) are recorded for the Kemerovskaya Oblast for the first time.

Three species of family Crabronidae, *Crossocerus emarginatus* (Kohl, 1899), *Passaloecus singularis*

Dahlbom, 1844 and *Pemphredon flavistigma* Thomson, 1874, are recorded for West Siberia for the first time.

According to the recent data, the wasp fauna of Kemerovskaya Oblast includes 5 species of Pompilidae, 27 species of Vespidae and 64 species of the family Crabronidae.
